Experience

Backend Developer Intern Sep 2026 – Oct 2026
Maximize.money *Remote*

- Patched **TOCTOU race conditions** and unauthenticated booking exploits, preventing credit-line drain.
- Fixed **BOLA/IDOR vulnerabilities**, securing gift card credentials (**Amazon, Dominos**) and customer PII.
- Implemented thread-safe **RS256 JWT caching** in **Go** for **SuperCoins**, cutting S2S API latency by **70%**.
- Built **v3 canonical request signing** to remove client-side hashing overhead; tuned **DB connection pools**.

Software Engineer Intern March 2026 – July 2026
Playto.so *Remote*

- Built backend features for a payment platform serving **10,000+ active users** across multiple geographies.
- Implemented payout logic for **refunds, chargebacks, negative balances, and settlements**.
- Built a unified refund, chargeback, and dispute system across **xPay**, and **Razorpay**.
- Integrated **Customer.io** for payment notifications and transactional emails.

Backend Developer Intern Aug 2026 – Sep 2026
Asama AI *Remote*

- Built unified **GitHub Actions** pipelines for **Debian**, **RPM**, and **Docker** releases.
- Modularized packaging for the **Host Agent** and **OpenTelemetry Collector**.
- Integrated **Pulp** for package publishing and repository management.

Backend Developer (Contract) Sep 2025 – Dec 2025
NuVista Technologies *Remote*

- Engineered server-side features with **Django REST APIs**, integrating **PostgreSQL** for seamless data flow.
- Deployed the application on **AWS Elastic Beanstalk** using **Gunicorn** as the WSGI server.

Projects

Algo Trading System | *Go, Python, Azure, Docker, Telegram API, Pushover* Build logs

- Built a **Go** market scanner using a worker-pool pattern to monitor 400+ crypto tickers in real time, generating ***Rs.*10,000–15,000 monthly profit**.
- Used **mutex locking** to prevent race conditions across parallel market data streams.
- Containerized with **Docker** and deployed on **Azure** for reliable 24/7 uptime.
- Added real-time buy/sell alerts via **Telegram** and **Pushover** APIs.

Overwatch AI | *JavaScript, TypeSafe Jev API* GitHub

- Built a Firefox extension that classifies distracting tabs using TypeSafe Jev in under 200ms.
- Implemented event-driven checks, a 5-second warning, and recovery tracking to cut false positives.
- Designed a lightweight workflow with allowlist rules and context evaluation for focused work.

VeriCred: Blockchain Credentialing | *Go, Solidity, React, IPFS, Go-eth* GitHub | Live Demo

- Built an EVM-compatible dApp issuing academic credentials as **ERC-721 NFTs**.
- Developed **Go** middleware using **go-ethereum** for on-chain minting and verification.
- Used **IPFS** content addressing for tamper-resistant, permanently accessible records.

Certifications

Oracle Cloud Infrastructure Certified Architect Associate View Certificate

Technical Skills

Languages: Python, Golang, Solidity, Javascript
Frameworks & Libraries: Django, React, Go-Chi, Flask
DevOps & Cloud: Docker, AWS (EC2, S3), Oracle Cloud (OCI), Git, GitHub, Linux
Databases: PostgreSQL, MySQL, SQLite, Redis
Technologies: Blockchain, Smart Contracts (ERC-721), IPFS, REST APIs, JWT Auth, OAuth

Education

Jaypee University of Engineering and Technology Guna, MP
B.Tech in Computer Science Engineering *Expected Graduation: 2027*
